SUMMARY

Embedded builder who ships production AI into customer environments. As Director of AI Ecosystems at Domo, has personally built 200+ production AI applications across 100+ enterprise accounts including Regions Bank, Manulife, Six Flags, and Texas A&M — running technical discovery, wiring agents into live systems through APIs and data pipelines under RBAC governance, and debugging deployments inside the customer's own stack. Ships fast: working prototypes against live data in hours, production applications in one to four weeks. Turns every engagement into reusable assets — pattern libraries, implementation playbooks, readiness checklists — and feeds field patterns back into product. Also built the practice around it: a 20-person engineering team and a 47-person Center of Excellence.

CORE COMPETENCIES

Deployment & Integration: Technical discovery and readiness assessment, proof-of-concept and sandbox builds, integration testing, customer-environment debugging (logs, configuration errors, incident triage), API connectors, token-based auth and API security, ETL and data pipelines, 1,000+ enterprise connectors, RBAC and governance

AI Engineering: LLM application development, multi-agent orchestration, agent-to-agent patterns, MCP-based tooling, RAG-style retrieval, prompt and pattern libraries, evaluation and benchmarking, hosted vs. local model routing, cost-per-task optimization

Software: JavaScript, React, SQL, REST APIs, Amazon Redshift, full-stack application development, SDLC and source control, agentic coding tools (Claude Code) as core infrastructure

Field & Customer: Enterprise discovery, live demonstrations and keynote delivery, executive stakeholder management, customer team enablement, reusable playbooks and troubleshooting guides, field-to-product feedback loops

Industries: Banking and financial services, insurance, higher education, hospitality, mobility — U.S. and Japan

PROFESSIONAL EXPERIENCE

Domo — Remote

Aug 2025 – Present

Director of AI Ecosystems

Mar 2026 – Present

- Built 200+ production AI applications deployed into enterprise customer environments — Regions Bank, Manulife, Six Flags, Texas A&M AgriLife — where security, governance, and auditability constrain every design decision.
- Run technical discovery and readiness assessments with customer stakeholders: environment and repository setup, permissions, configuration needs, data readiness, and adoption blockers.
- Architect and troubleshoot integrations inside customer systems — API connectors, token-based authentication, ETL pipelines, and 1,000+ data connectors deployed under RBAC controls.
- Ship fast: wire agents to live customer datasets in 5–10 minutes using Claude Code, stand up working prototypes in hours, and deliver production applications in one to four weeks.
- Designed a Domo + LLM reference architecture with agent-to-agent orchestration, and built multi-agent suites with monitoring, alerting, and command-center dashboards.
- Create reusable deployment assets — pattern libraries, implementation playbooks, readiness checklists, and troubleshooting guides — so engagements scale without repeating the work.
- Drive hosted-versus-local model routing and cost-per-task optimization; higher-quality reusable patterns cut token consumption and lower the model tier each workload requires.
- Convert field patterns and technical blockers into product feedback and roadmap input, and advise the C-suite (CEO, CRO, CMO, CTO) on AI investment.
- Stood up the forward-deployed practice itself: a repeatable five-phase delivery model from discovery to adoption, a 20-person engineering team, a 47-person Center of Excellence, technical build standards, and technical hiring.
- Presented live on the Domopalooza 2026 keynote stage with CEO Josh James, building five working AI agents in roughly five minutes.

Senior Technical Consultant

Aug 2025 – Mar 2026

- Full-stack developer building custom applications and API connectors wiring any data source into Domo for enterprise accounts; delivered fixed-timeline contracts to spec in cross-functional tiger teams.

Turo — Phoenix, AZ

Feb 2020 – Aug 2025

Data Analyst • Team Leader • Senior Account Executive

progressive roles

- Led the migration from Salesforce and Tableau to Domo as the company-wide BI platform; built business logic across Redshift and Domo powering datasets used by Sales, Ops, and Partner teams.

- Drove adoption org-wide through hands-on training, stakeholder alignment, and visualization standards, and built internal tools that made the Host Success team measurably more effective.
- Led 9-13 Host Success Managers on the largest account book at Turo; as Senior AE, scaled top accounts past \$100K/month through data-driven coaching.

Extra Mile Consulting, LLC — Owner

2017 – 2025

- Built custom applications and web tools for quoting, scheduling, and marketing; advised small businesses on go-to-market strategy and digital transformation.

Earlier Career — Technical B2B Sales & Territory Management (Orgill, Henry Co., Milwaukee Tool)

2015 – 2020

- #1 U.S. sales representative; grew territory 130%+ across 250+ distributor accounts and \$1M+ annual revenue.

RECOGNITION, CERTIFICATIONS & LANGUAGES

- Domopalooza 2026 keynote speaker (with CEO); recognized voice on agentic systems, the “headless enterprise,” and AI pattern libraries.
- SQL Crash Course Certification — Uplimit (2024). Turo Account Manager MVP; Turo SOAR Award; Top U.S. Sales Rep, Milwaukee Tool.
- Languages: English (native); Spanish (limited working proficiency).
